

Manufactured in Italy, Vertex, the premier brand of OEM replacement pistons, is the OEM supplier to KTM and numerous European motorcycle and go-kart manufacturers. Vertex offers enthusiasts state-of-the-art, high-quality pistons for nearly any powersport use from motorcycles and ATVs to marine and karting. Manufactured to the highest standards in Japan, Vertex's piston rings are produced by the OEM suppliers so that they are direct OEM replacements. Vertex is the choice of those who truly seek the optimum in powersport performance in any application.

I pistoni Vertex sono interamente prodotti in Italia e sono primo equipaggiamento di numerose case europee produttrici di moto e go-kart, con in evidenza KTM. Vertex offre agli esperti di elaborazioni, pistoni di alta qualità tecnologicamente ai vertici del settore, utilizzabili per qualsiasi applicazione nei settori: moto (strada e fuoristrada), Quad, ATV, go-kart e fuoribordo, dove il massimo della potenza è un requisito imprescindibile. I segmenti assemblati da Vertex sui propri pistoni, sono fabbricati in Giappone secondo i massimi standard del settore dai fornitori OEM delle maggiori case giapponesi di moto, sono quindi intercambiabili con i prodotti originali. Vertex è la scelta numero uno di chi esige il massimo delle prestazioni nel mondo degli sport motoristici, per qualsiasi applicazione.

Cast vs. Forged What's better and why:

Vertex Two-stroke Pistons

Because of a cast piston's ability to contain higher silicon content compared to forged pistons, and because two-strokes have lower cylinder pressures when compared to four-strokes, cast pistons are ideal for two-stroke engines. Vertex pistons are gravity cast from an aluminum alloy with 18% silicon content. Silicon is important because:

- It decreases thermal expansion, which changes the geometry after the piston reaches operating temperature. With low thermal expansion characteristics, Vertex pistons can be run at tighter tolerances compared with forged pistons. This creates better power and performance, also making them less susceptible to rattling or breaking.
- Silicon gives the pistons better wear characteristics and prolongs piston life by decreasing wear on the piston skirt.

Fuso o forgiato Cosa è meglio e perché:

Pistoni Vertex per motori a 2 tempi

Poiché un pistone realizzato tramite fusione può avere un contenuto maggiore di silicio rispetto al forgiato, e poiché nei motori a 2 tempi le pressioni nei cilindri sono inferiori rispetto alle versioni a 4 tempi, i pistoni fusi sono la soluzione ideale per questa applicazione. I pistoni Vertex 2 tempi, sono realizzati per fusione a gravità da una lega di alluminio con contenuto di silicio pari al 18%. Il contenuto di silicio è importante perché:

- Riduce l'espansione termica che determina il cambiamento della geometria del profilo dopo che il pistone raggiunge la temperatura d'esercizio. Grazie a caratteristiche di espansione termica ridotta, i pistoni Vertex per motori 2 tempi, possono funzionare con tolleranze più ristrette rispetto ai pistoni forgiati. Ciò garantisce un sensibile incremento in termini di potenza e durata, con la sicurezza di un funzionamento più silenzioso e senza eventuali rotture.
- La presenza dell'alto contenuto di silicio permette anche una migliore resistenza all'usura e prolunga quindi la vita del pistone senza cali di prestazioni.

Vertex Four-stroke Pistons

Four-stroke engines have much higher cylinder pressures when compared to two-strokes and are generally manufactured from forgings. To handle the internal pressures of a four-stroke engine, Vertex's four-stroke pistons are forged from the highest quality 2618 aluminum alloy for superior strength and durability. Vertex uses unique piston profiles and compression ratios, offered in A, B, C and D sizes, to maximize power and performance while reducing blow-by and oil consumption.

Pistoni Vertex per motori a 4 tempi

I motori a 4 tempi hanno pressioni nei cilindri molto più elevate rispetto ai 2 tempi e generalmente i pistoni da equipaggiarli, vengono prodotti tramite forgiatura a caldo. I pistoni Vertex per motori 4 tempi vengono forgiati a caldo dalla lega per uso aeronautico 2618, un prodotto di altissima qualità che garantisce doti superiori di resistenza e durata. Vertex applica poi profili esclusivi e conformazioni di testa derivati dallo sviluppo fatto con i teams, il tutto al fine di ottimizzare al massimo potenza, coppia e prestazioni in generale, riducendo al contempo consumo d'olio e trafilamento (blow by).

Aiding in the break-in process and reducing wear, every Vertex piston has a Molybdenum Disulphide (MOS2) coating on the piston skirt.

Per facilitare il rodaggio e ridurre l'usura, ogni pistone Vertex è provvisto di rivestimento in bisolfuro di molibdeno (MOS2) sull'intero corpo del pistone.

Vertex Wrist Pin Features:

- KTM four-stroke wrist pins are DLC coated.
- Case hardened wrist pins are used with all Vertex pistons.
- Nitride coated pins are normally used for high performance four-stroke engines utilizing a bronze bushing or with engines using a steel connecting rod without bearings. This hardened surface is highly wear resistant and provides anti-galling properties.
- Nitriding is a highly specialized surface treatment that produces a highly wear resistant surface. The significant advantage of nitriding is that the surface hardness is developed without quenching and the attendant distortion problems with case hardening. Finishing operations can be eliminated or held to a minimum.

Spinotti Vertex:

- Gli spinotti Vertex, sono normalmente prodotti in acciaio legato con trattamento di cementazione. In aggiunta, esistono le seguenti varianti per i rispettivi campi di applicazione:
- Spinotti nitruati che sono normalmente utilizzati per motori a quattro tempi a elevate prestazioni, che hanno la biella in acciaio con o senza bronzina. La superficie nitruata è altamente resistente all'usura e fornisce caratteristiche antigrippaggio.
- Gli spinotti per i pistoni destinati a motori 4 tempi KTM, sono provvisti di rivestimento in DLC.

Vertex Piston Rings

Vertex's latest generation two-stroke and four-stroke piston rings are nitride coated or chrome plated, increasing wear resistance and extending durability. Vertex piston rings are exact OEM replacements.

Segmenti Vertex

I segmenti Vertex di ultimissima generazione per motori a 2 e 4 tempi sono realizzati in acciaio con trattamenti di nitrurazione o cromatura. Il tutto per aumentare la resistenza all'usura e per migliorare la durata di vita. I segmenti per pistoni Vertex sono intercambiabili con i corrispettivi prodotti OEM.

All Vertex Pistons Feature:

- Standard pistons and components are OEM replacements.
- Kits include piston, rings, wrist pin and circlips.
- All pistons are heat treated with a T-5 or T-6 hardening and tempering cycle.
- Replacement rings are sold individually.

All Vertex Pistons Feature:

- I pistoni e i componenti standard sono intercambiabili con i rispettivi prodotti OEM.
- I kit comprendono pistone, segmenti, spinotto e anellini.
- Tutti i pistoni sono sottoposti a trattamento termico con ciclo di bonifica T5 o T6.
- I segmenti di ricambio vengono anche venduti singolarmente.

CODICE CODE	DESCRIZIONE DESCRIPTION
Replica	Pistone fuso in forma originale <i>Cast piston in original OE form</i>
Race	Pistone fuso sviluppato con tecnologia Vertex <i>Cast piston developed with Vertex know-how</i>

I kit guarnizione distribuiti da **VERTEX** sono prodotti in USA con materiali tecnologicamente all'avanguardia ed hanno come obiettivo quello di migliorare le pur ottime prestazioni già fornite dai prodotti originali, sia per motori a 2 che a 4 Tempi. Questi kit sono completi delle guarnizioni per valvole, o-rings e scarico fissando un punto di riferimento per il motociclista più evoluto che solitamente vuole sempre il massimo dal proprio motore.

Queste le configurazioni disponibili:

- **VG810** è il formato **Top End Gasket Kit** composto da guarnizione testa, basamento e tutte le altre guarnizioni necessarie in caso di sostituzione del pistone completo o dei soli segmenti.
- **VG808** è il formato **Complete Engine Kit** composto da tutte le guarnizioni necessarie per revisionare l'intero motore compreso la parte trasmissione.
- **VG822** è il formato **Oil Seal Kit** che contiene tutti i paraolio necessari per revisionare il motore compreso la parte trasmissione.

***VERTEX GASKETS** are made in the USA with the highest grade gasket materials available. They are well suited to sealing the high revving two and four stroke engines in today's market. They come complete with valve seals, o-rings and crush type exhaust gaskets where applicable. These kits are the most complete and well engineered kits available on the market today!*

***VERTEX GASKETS** are in three different kit configurations to meet your particular projects needs:*

- ***VG810** Series kits are top end gasket kits which contain head, base and all the other gaskets needed for piston or ring replacement.*
- ***VG808** Series kits are complete engine kits which contain all the gaskets necessary to rebuild the entire engine and transmission.*
- ***VG822** Series kits are oil seal kits only. They contain all the oil seals to rebuild your engine and transmission.*

2 Stroke

After disassembling the cylinder head and the cylinder, it's necessary to measure the actual cylinder diameter (1), using a dial bore gauge. When actual bore size is known then it is time to pick the right VERTEX piston to fit your bore size, respecting the clearance suggested with the cylinder (i.e. CR 125 clearance 0.05 mm).

Open the piston box, take the ring and position it inside the cylinder bore. Measure the gap (2) between the two ring ends: it must be between a minimum of 0.25 and a maximum of 0.50 mm; if necessary adjust the ring end gap dimension using a file (3). Take special care when performing this step.

We are now ready to assemble the ring into the piston groove: first of all pay attention to not crush or damage the ring during installation, every precaution should be taken not to compromise the ring integrity with the groove and to not reduce the rings retaining pressure.

Attention must be paid to any markings (i.e. T) on the rings surface: always position the ring with the written part on the top side.

Introduce before the ring from the side opposite to the locating pin and turning it as it was a spring taking care to not damage the groove during the operation. After verifying that the rings do not have strange creeping or binding, position the ring tips around the locating pin.

We are now ready to assemble the piston and cylinder. A light coating of two stroke oil should be applied to the piston with the ring(s) assembled. Position the arrow printed on the piston dome toward the exhaust side, install one circlip on the opposite side you will slide the pin thru and pressing the ring (or the rings) into the groove one by one starting from the top slide the cylinder assembly over the rings. When this is complete carefully lower piston and cylinder onto the connecting rod and slide piston pin thru piston and rod and install circlip. If you prefer you may install piston onto connecting rod first and then compress ring(s) and install cylinder (4).

Assemble cylinder onto cases and install cylinder head and torque all fasteners to the recommended specs in your owner's manual.
